

Capstone Project — The Battle of Neighbourhoods

Introduction

New Delhi is the capital city of India. It is a part of the city of Delhi's 11 districts. The city itself has a population of 257,803. However, the much larger metro area has a population that exceeds 26 million.

New Delhi are used interchangeably to refer to the National Capital Territory of Delhi (NCT), these are two distinct entities, with New Delhi forming a small part of Delhi. The National Capital Region is a much larger entity comprising the entire NCT along with adjoining districts in neighboring states.

The official language of New Delhi and the one that is most widely spoken is Hindi. However, English is also spoken as a formal language within businesses and government agencies. Over last decades it is continuously grow because of the city's important role in government and commercial business.

With its diverse culture, comes diverse food items. There are many restaurants in New Delhi City, each belonging to different categories like Chinese, Italian, and French etc. So as part of this project, we will list and visualize all major parts of New Delhi City.

Questions that can be asked using the above mentioned datasets

- What is best location in New Delhi City for Chinese Cuisine?
 - Which areas have large number of Chinese Restaurant Market?
 - Which all areas have less number of restaurant?
 - Which is the best place to stay if I prefer Chinese Cuisine?
 - What places are have best restaurant in New Delhi?
-

Data

For this project we need the following data :

- New Delhi Restaurants data that contains list Locality, Restaurant name, rating along with their latitude and longitude.
 - Data source : [Zomato kaggel dataset](#)
 - Description: This data set contains the required information. And we will use this data set to explore various locality of New Delhi city.
- Nearby places in each locality of new delhi city.
 - Data source : [Fousquare API](#)
 - Description: By using this api we will get all the venues in each neighborhood.

Approach

- Collect the New Delhi city data from [Zomato kaggel dataset](#)
- Using FourSquare API we will find all venues for each neighborhood.
- Filter out all venues that are nearby by locality.
- Using aggregative rating for each restaurant to find the best places.
- Visualize the Ranking of neighborhoods using folium library(python)

```
In [1]: import pandas as pd
import numpy as np
import requests #library to handle requests
from pandas.io.json import json_normalize # tranform JSON file into a pandas dataframe
# Matplotlib and associated plotting modules
import matplotlib.cm as cm
import matplotlib.colors as colors
# import k-means from clustering stage
from sklearn.cluster import KMeans

!conda install -c conda-forge folium=0.5.0 --yes # uncomment this line if you
haven't completed the Foursquare API lab
import folium # map rendering library
! pip install geocoder
import geocoder
```

-failed

UnsatisfiableError: The following specifications were found to be incompatible with the existing python installation in your environment:

Specifications:

```
- cffi -> python[version='2.7.*|3.5.*|3.6.*|3.6.12|>=3.6,<3.7.0a0|>=3.7,<3.8.0a0|>=3.9,<3.10.0a0|>=3.8,<3.9.0a0|3.6.9|3.6.9|3.6.9|>=2.7,<2.8.0a0|3.6.9|>=3.5,<3.6.0a0|3.4.*',build='0_73_pypy|2_73_pypy|4_73_pypy|3_73_pypy|1_73_pypy']
- rsa -> python[version='2.7.*|3.4.*|3.5.*|3.6.*']
```

Your python: python=3.7

If python is on the left-most side of the chain, that's the version you've asked for.

When python appears to the right, that indicates that the thing on the left is somehow

not available for the python version you are constrained to. Note that conda will not

change your python version to a different minor version unless you explicitly specify that.

The following specifications were found to be incompatible with each other:
